

**Connecting People and Technology with Solutions!™**

Headquartered in the capital of Silicon Valley, eSudo Technology Solutions (eSudo) is a leading IT consulting firm providing services and expert consulting to small businesses, non-profit organizations and individuals. eSudo is a Microsoft Certified Partner and Microsoft Small Business technology Specialist. Our goal is to help you succeed, save money and make the most of your technology investment.

As an independent and unbiased consulting company, eSudo helps organizations assess their needs, plan and implement the right technology for the

given goals, budget, and timeline. This assures a custom-tailored solution to integrate with existing multi-vendor environments, and provide a growth path for the future.

The success of eSudo is based on a depth of experience and expertise distinctive in the computer networking and engineering industry. Our industry experience of over 15-years range from system engineering, web development, software engineering to product marketing. Our staff consists of experts with years of industry experience and certifications in Microsoft, Cisco, Linux, Dell, and Symantec.

The technical training of our staff combined with our rigorous approach to customer satisfaction allows us to offer comprehensive outsource IT services:

**Networking Infrastructure**—design, implement and manage a reliable and scalable computer solution based on Microsoft Windows Server 2000, Windows Server 2003 Operating Systems, or Microsoft Small Business Server (SBS) 2000 and 2003, Active Directory, DNS, WINS, Red Hat Linux, and Cisco switch and router.

**Email Messaging & Wireless Communication**—design, install and support e-mail systems based on Microsoft Exchange Server 5.5, 2000 and 2003, Microsoft Office, Linux qmail MTA, Windows Mobile Smartphone, Pocket PC, Palm Treo, and RIM Blackberry Enterprise Solutions.

**Information Security**—protects business data, e-mail and network infrastructure against viruses, spam, and information leakage, while enabling secure remote access. Security solutions based on products such as Microsoft Internet Security and Acceleration (ISA) Server 2004, Microsoft Windows Rights Management Services (RMS), Cisco PIX and ASA firewall/VPN appliance, Netscreen, Sonicwall, Symantec and Trend Micro anti-virus and anti-spam.

**Remote Management**—provides remote network monitoring and support for desktop and server. By anticipating potential problems before they cause downtime, system monitoring can keep your network free of stressful and costly service disruptions. Our remote support provides greater productivity and reduced downtime.

**Ongoing Network Maintenance and Support**—provides a combination of proactive maintenance and strategic technology and business services including planning, network design, implementation, and optimization of IT infrastructures.

**Data Backup and Disaster Recovery Program**—create and implement a program that prevents and protect loss of critical data, e-mail and computing infrastructure. Our solution is designed to restore full network functionality with minimal loss of productivity, and is based on specific action plans, escalation procedures, and data retention and restoration policies. Technology we support, but not limited to, include Symantec (Veritas) Backup Exec, NetBackup, LiveState Recovery Advanced Server, Ghost and Acronis True Image.
